

Guess the Plants - Vivienne Khan

I've done a passive program by growing different types of seeds/beans using Ziploc bags with some paper towel in the bag, and little bit of water (just enough to keep the paper towel moist). Each bag is pinned on the bulletin board. The purpose was to let kids observe the growth of each bean/seed and guess what plant is growing in each bag. At the end of the month, I pinned the answer on top of each plant. We are going to do it again this summer as we can tie it to this year's Summer Reading Program theme.

Kids loved watching the growth of the plant. Some of them even offered to come and "water" the plant for me....

I also displayed some books about seeds/plants under the bulletin board. It came handy when some kids asked me to identify each part of a plant in the bag. It was fun.
